MCL-Client 4.40 Update Packages

Package Details

Package #	MCL-Client Version	Release Date	Scope
P10	4.40.10.37064	15.07.2026	<i>Zebra Android</i> supported Devices

MCL-Client 4.40.10.37064 Update (P10)

New Devices

- *Zebra Device(s)*
 - ✓ ZBR_TC701_AD15

Enhancements

- *MCL Voice Operator Login App*: Version updated to 4.10.54.
- *Scanner (Zebra Plugin)*: The efficiency of the activation and use of Barcode Reading has been improved.

Bug Fixes

- *Controls*: Fixed a crash that was triggered when attempting to set non-numeric values via a "Set Value" process (Control Operations process group) to a Gauge control.
- *Controls*: Fixed an issue that caused the "Change" action to be executed twice in an Advanced List Box control.
- *Controls*: Fixed an issue that prevented the Tab Stop function from working correctly and would cause a freeze or crash whenever a Softkey control was mapped to the "ENTER" or "SPACE" key codes.
- *Controls*: Fixed an issue affecting the use of Grid controls - an ANR would be triggered after the device woke up from an idle state and the screen with the Grid control was set to a Landscape orientation.
- *Processes*: Fixed an issue that prevented the "Set Focus" process (Control Operations process group) from working correctly when there was a "Change" action in the last Input Control, on a screen, with focus.
- *Remote Control*: Fixed an issue that prevented the execution of a Remote session when the accessed *MCL* application included Input Keyboard controls configured to accept alphanumeric values - the input of an alphanumeric value would trigger a "ScreenShare Protection" which prevented the screen from being viewed by the remote user.
- *Scanner*: Fixed an issue that caused a crash when a scanner profile or parameter service contained empty parameters.
- *Speech*: Fixed an issue that caused a crash when pairing a Bluetooth headset to a device via MAC address.
- *Speech*: Fixed an issue that prevented immediate Headset Recognition when pairing a Bluetooth headset to a device.
- *Speech*: Fixed an issue that caused crashes during Remote Sessions with *MCL's* "Speech Monitor" app on 64-bit *Android* devices.
- *System*: Fixed an issue that occurred after turning off the screen/the device became idle - when the device woke up/the application resumed, the focus was not where it was expected.
